EDUCATION

B.Tech, Computer Science Engineering (Data Science)

CGC Landran

Expected Graduation: July 2028

TECHNICAL SKILLS

Programming & Database

Python

SQL

PostgreSQL

Libraries

Pandas

NumPy

Matplotlib

Seaborn

Tools

Git

GitHub

VS Code

Jupyter

pgAdmin

Concepts

Data Cleaning

EDA

Database Design

SQL Joins

GROUP BY

HAVING

Subqueries

Window Functions

CTEs

RELEVANT COURSEWORK

- Python Programming
- Object Oriented Programming
- Statistics
- SQL & Database Management
- Data Analysis

LANGUAGES

English

Hindi

PROFESSIONAL SUMMARY

Data Science student skilled in Python, SQL, and PostgreSQL, with hands-on experience performing data analysis, data cleaning, and data visualization using Pandas. Builds end-to-end projects that turn raw datasets into clear, actionable insights, backed by strong problem-solving and analytical skills. Seeking a Data Analyst or Data Science Internship to apply and grow these skills in a real-world setting.

PROJECTS

PostgreSQL Student Management System

PostgreSQL · SQL · pgAdmin

- Designed and implemented a normalized relational schema for a college management system spanning students, departments, teachers, courses, enrollments, attendance, and marks
- Built primary keys, foreign keys, and constraints to enforce data integrity and maintain accurate relationships across a multi-entity database
- Developed 30+ SQL queries covering joins, GROUP BY, HAVING, subqueries, window functions, and CTEs to support data retrieval and reporting

GitHub: <https://github.com/paras4151/postgresql-student-management-system>

Unicorn Startup Analysis

Python · Pandas · NumPy · Matplotlib · Seaborn

- Cleaned and preprocessed a global unicorn startups dataset, handling missing values and inconsistent entries to prepare it for analysis
- Performed exploratory data analysis and built visualizations to examine startup valuation, funding trends, and country-wise distribution
- Extracted business insights on funding patterns and high-growth markets, summarized in a concluding analysis section

GitHub: <https://github.com/paras4151/unicorn-startup-analysis>

IPL Data Analysis

Python · Pandas · Matplotlib · Seaborn

- Cleaned and structured IPL match and player datasets to prepare them for exploratory analysis
- Performed exploratory data analysis and created visualizations highlighting scoring trends, match outcomes, and season-wise patterns
- Analyzed team and player performance data to surface insights on consistency and impact across matches

GitHub: <https://github.com/paras4151/ipl-data-analysis>

Anime Dataset Analysis

Python · Pandas · Matplotlib · Seaborn

- Cleaned the anime dataset by handling missing values and standardizing fields for consistent analysis
- Performed exploratory data analysis and built visualizations to examine genre distribution, ratings, and popularity trends
- Identified patterns linking genre and rating to overall popularity across the dataset

GitHub: <https://github.com/paras4151/anime-dataset-analysis>
